03 Method and measured rates

Company and vessel names: words aligned in any order and weighted by their rarity on the lists, typos, OCR slips and romanisation variants tolerated, vessel numbers must agree, a listed name found inside a longer one is a possible match, and former names, trading names and document annotations are read as such. Two thresholds, strong 0.81 and possible 0.80, set by a written rule on training pairs only, then frozen before any held-out measurement. The possible level was sized so that about one name in forty goes to review on our example books of counterparties; a book of short, generic trading names sends many more to review.

Measured once on real company names from the GLEIF register, never used to set a threshold. Of 469 companies under two spellings of the same name, 222 were found at strong [42.9 to 51.9 %] and 318 at possible [63.4 to 71.9 %]: about 32 % of real spelling variants are missed even at possible. Of 1,000 pairs of real, different companies, 0 raised a strong alert [0.0 to 0.4 %] and 2 a possible one [0.1 to 0.7 %]. On an easier set of 400 invented pairs written by a separate AI agent that never saw the matcher, 334 were found at strong.

04 What this report does not do

1. A candidate is not a finding. Each one is for your compliance officer to confirm or clear; this report does not decide, and it is not legal advice.
2. The lists are those downloaded on 2026-09-26, 2026-10-04. A name added to a list after that date is not in this report.
3. Names and IMO numbers only are compared. Dates of birth, addresses and other identifiers on the lists are not.
4. Ownership is not screened. Under OFAC's 50 Percent Rule, an entity owned 50 % or more, directly or indirectly, by one or more blocked persons is itself blocked even when it appears on no list; no name screening can see that.
5. The type and country columns you send are kept in the sealed record, not used to filter: a counterparty listed under another type or country is still shown.
6. At most 5 candidates are shown per name, highest score first; the count of the others is given.
7. The rates in section 03 were measured on company names from a public register and on invented pairs, not on your counterparties.
8. A vessel screened without its IMO number can be missed if it has been renamed: send the IMO whenever you have it.
